Ho iniziato configurando gli ip su kali e windows xp

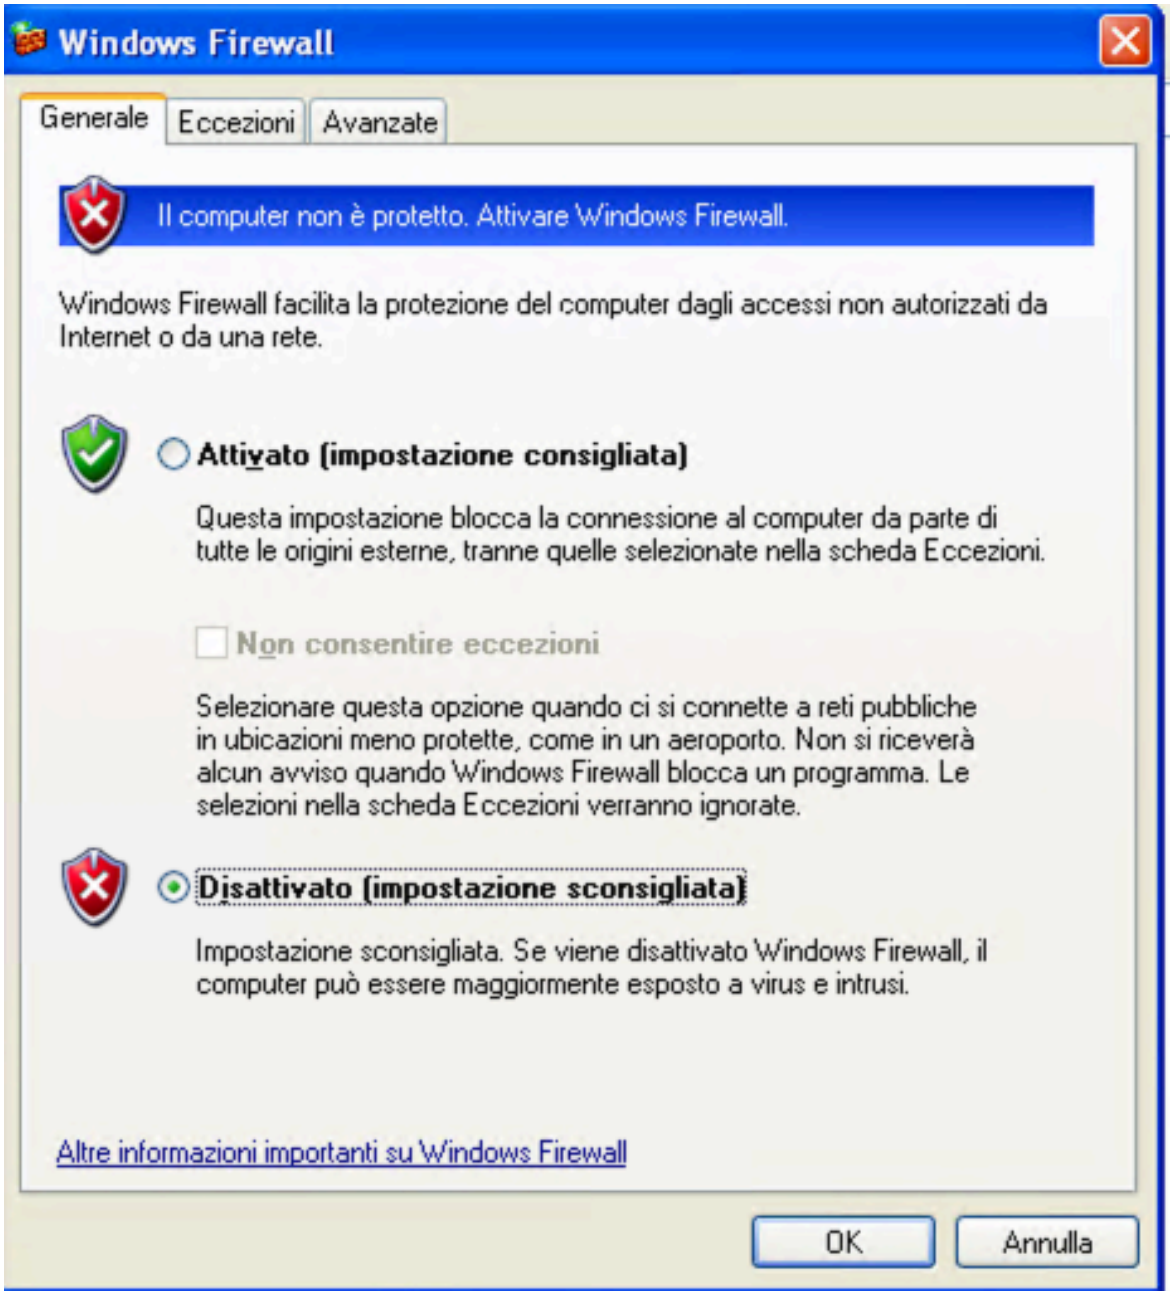
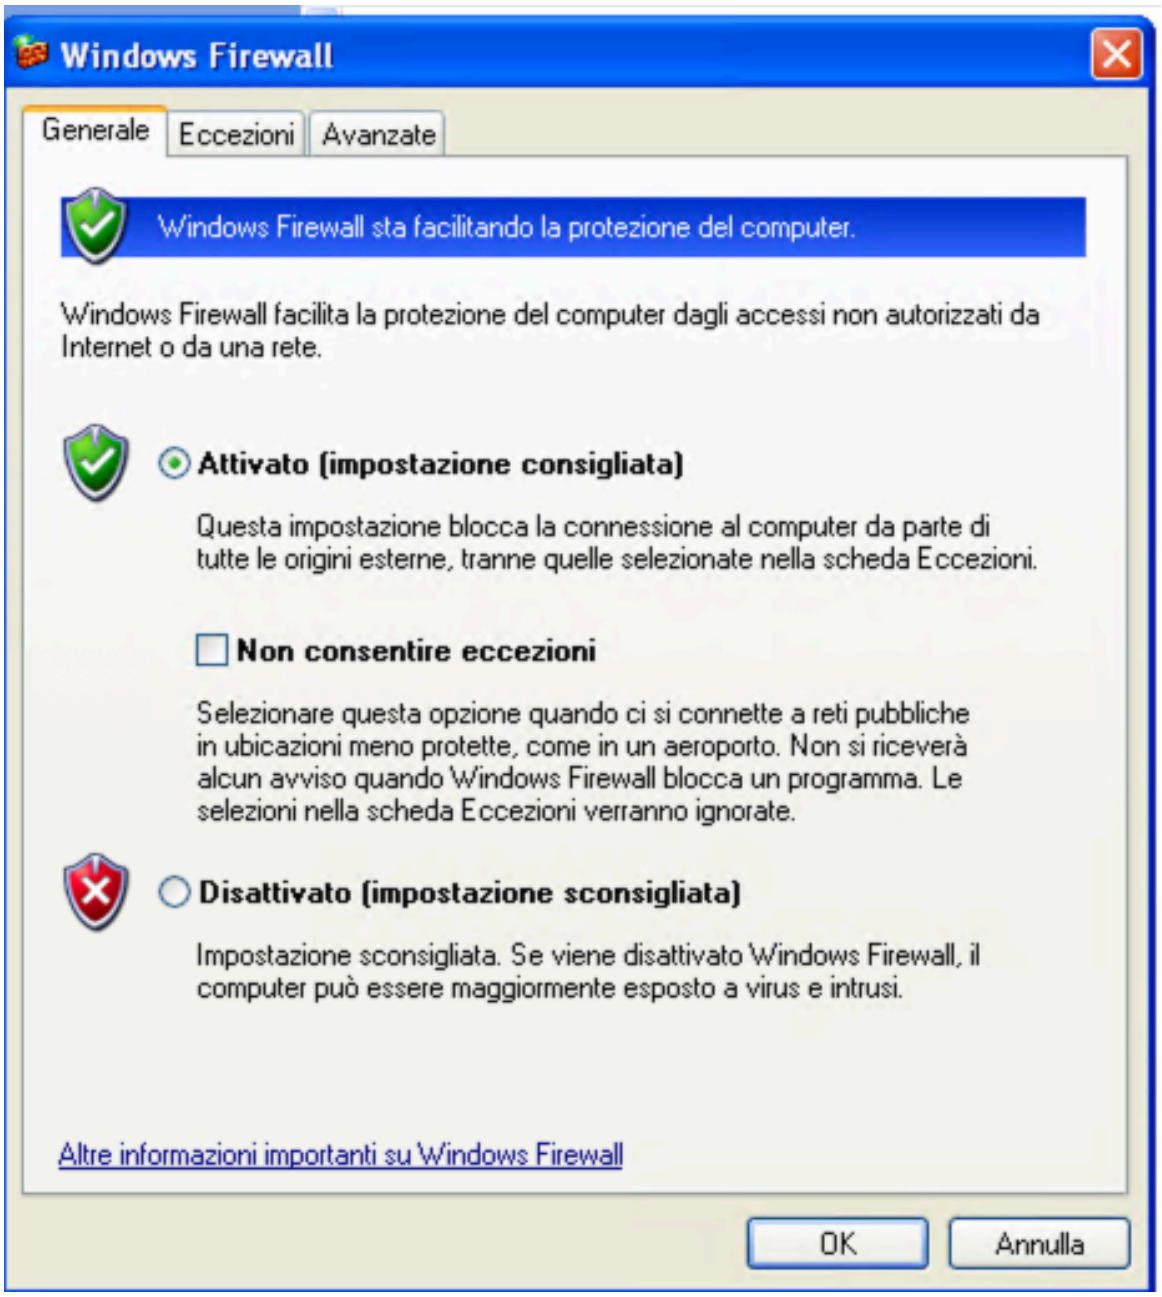
Ho disattivato il firewall su Windows xp



Ho eseguito una scansione con nmap con lo switch -sV e con un file di output

```
┌──(kali㉿kali)-[~/Desktop]
└─$ nmap -sV -A 192.168.240.150 -o winxp_firewalloff
```

Poi ho attivato il firewall su windows xp e ho rieseguito la stessa scansione nmap, ovviamente cambiando il nome del file di output



```
┌──(kali㉿kali)-[~/Desktop]
└─$ nmap -sV 192.168.240.150 -o winxp_firewallon
```

Poi ho confrontato i due risultati

```
┌──(kali㉿kali)-[~/Desktop]
└─$ cat winxp_firewalloff

Si può notare nel terminale a destra che con il firewall attivato non è stato possibile individuare le porte aperte/chiuse e i relativi servizi.
Per capire meglio si possono rieseguire le scansioni nei due casi e analizzarli con wireshark

Si può notare che la 192.168.240.100 (kali) effettua vari tentativi di connessione TCP SYN su varie porte (i pacchetti di colore grigio), mentre la macchina 192.168.240.150 (windows xp) risponde con pacchetti RST, ACK.
Questo perchè che quelle porte sono chiuse ma senza un firewall che blocca attivamente questi tentativi.

Sulle porte aperte risponderà invece con SYN, ACK

Firewall attivato:

1	0.000000000	192.168.240.100	192.168.240.150	TCP	74	58664 → 80 [SYN] Seq=0 Win=32120 Len=0 MSS=1460 SACK_PERM TSval=2262033702 TSecr=0 WS=128

In questo caso vengono catturate solo le richieste SYN da parte di 192.168.240.10 (kali) ma non ricevono alcuna risposta perchè il firewall le riconosce e le blocca attivamente impedendo alla macchina 192.168.240.150 di rispondere con pacchetti SYN, ACK o RST, ACK ai tentativi di connessione della macchina 192.168.240.100, in questo caso infatti nmap ha terminato subito la scansione non vedendo risposte.
Il firewall ha impedito alla macchina attaccante di poter conoscere lo stato delle porte e i servizi, questo è importante e porta alcuni vantaggi tra cui:

- La riduzione della superficie di attacco.
- Avere maggior tempo per individuare e rispondere ad un potenziale attacco.
- Difesa contro strumenti automatizzati
